# Intel® Cache Acceleration Software

Intel® Cache Acceleration Software combined with Intel® Data Center Family SSDs is an industry unique solution that delivers application specific performance on physical servers and virtual machines via Selective Optimized Caching.

Application performance is being held back by storage speeds.

Today's multi-core, multi-CPU servers are held back by storage I/O that cannot keep up with ever-increasing demand, preventing systems from reaching their full performance potential. Traditional solutions of adding more storage, servers, or memory, adds huge expense, as well as management complexity.

Intel has the answer – software that installs on the server and uses fast SSD/Flash media to cache “hot” data, eliminating I/O latency and driving targeted application performance from back-end storage via intelligent caching, not extreme spending.
